Bubble out

Bubble out

Bubble out is the first topical treatment containing specific ingredients able to improve **acne in an active phase**, in all its stages, only in a few sessions.

Bubble out

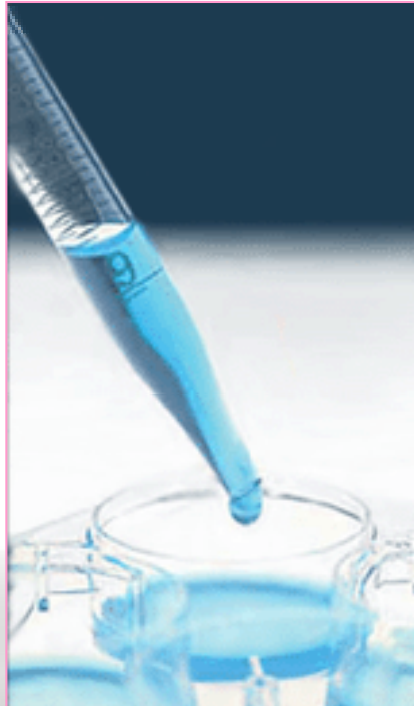

Bubble out is a mixture of components capable of eliminating the symptoms of acne quickly:

- inflammation
- Follicular hyperkeratinization
- bacterial alteration and contamination
- hyperchromy

Bubble out

The kit contains 4 vials of 10 ml of product and a Dropper.

THERAPEUTIC ACTION

Salicylic Acid

Beta hydroxy acids inhibits comedones, favours epithelial desquamation and has an antibacterial action

Azelaic Acid

Azelaic acid is a dicarboxylic acid that inhibits 90% of the enzyme 5-alfa H-reduttasi, implied in the synthesis of androgens. It exercises an anti-inflammatory action antibacterial and hypopigmented action and a remarkable anti-comedogenic action. It also fights free radicals and inflammation.

Mandelic Acid

Alpha-hydroxy acids with eight atoms of carbonium, functions as an epidermal re-activator with a tensor effect. It is particularly active for repairing and re-activating aged skin. It has antibiotic properties and is efficient for inflammatory acne

Components

PROTECTIVE AND REGENERATIVE CUTANEOUS ACTION

Glycyrrhetic acid Molecule of natural origin with recognized clinical properties and demonstrated by numerous studies both in vitro and in vivo

Performs:

- Anti-inflammatory action that helps to reduce the irritation caused by acids
- Antiseptic action

Other actions:

- inhibition of the release of stamina
- inhibition of the production of free radicals

It is interesting to notice that:

- the free radicals produced by leukocytes are one of the main causes of the damage of the follicular epithelium in cases of acne and rosaceous.
- When used at a topical level it has remarkable anti-congestant and anti-inflammatory properties comparable to topical cortisone.

Components

Bisabololo

It is an active 100% vegetable component obtained by the distillation of essential oil of the *Vanillosmopsis Erythropappa*, a type of chamomile.

It has scarring properties and it is lenitive against irritations and is anti-inflammatory.

Thanks to its properties, it is used in products intended for delicate skin, affected by atypical and seborrheic dermatitis and irritations.

Bubble out: Protocol

Protocol

Papulo-pustular, polymorphic and phlegmonous acne.

- Cleansing of the area
- Application of a patch with a pre-peeling action containing alpha hydroxy acids
- Punctiform incision of the furuncle with a sterile needle
- Application through a Dropper of the Bubble out solution
- Rinse the treated area with an alkaline solution.

Nodular cystic, comedonal acne and in case of non-suppurative furunculosis.

- Cleansing of the area
- Application of a disk containing alpha hydroxy acids with a pre-peeling action.
- Application through a Dropper of the Bubble out solution
- Massage in order to spread the product to the entire area
- Rinse the treated area with an alkaline solution.

Bubble out: Protocol

3 - 4 sessions 21 days apart from each other

2 sessions of follow-up every 2 months.

It is preferable to realize the treatment during the winter.

Bubble out: Protocol

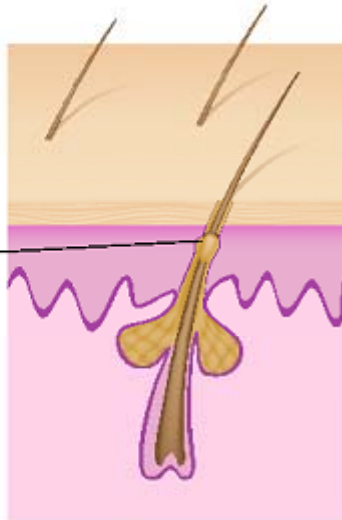

After the treatment, it is recommended to apply a soothing, anti-inflammatory and skin restoring cream.
